5/7/76--Just a brief note. In a letter to me, you commented on my pointing out to you the masking of the return address stamp on a sample of the FPCC literature that Hoover sent the WC, printed at 22H807. You note there are two visible maskings and wonder whether this was where an unidentified print was. I don't believe so. As I explained previously, the masked copy is of the identical copy which appears as CE 2966-A (26H448) On that, in addition to the stamp, and to the right of it, there appear two sets of initials and the date 11-23-63. The initials seem to be JM and ABV, but I'm not sure. At any rate, it is these initials and the date that is obscured by the second masking on the sample at 22H807.

HR

Well?
